

## AHFS Drug Information

### Product Description

AHFS Drug Information, published by the American Society of Health-System Pharmacists (ASHP), has been the leading source of evidence-based drug information available to health care professionals for almost 50 years. The quality and consistency of the information make it the most widely respected drug reference for addressing critical questions that require objective evidence. It is evidence-based and peer-reviewed by over 500 pharmacists, physicians, and other health care professionals and is supported by extensive objective research from primary sources. AHFS DI is compiled without the influence of manufacturers, insurers, regulators or other interested parties. AHFS DI includes:

- Uses included in the labelling approved by the US Food and Drug Administration and uses that are unlabeled but well-established in the scientific literature
- Over 1,200 monographs on over 50,000 drug products
- Unlabeled uses linked to evidence-based references
- 75,000 references linked to more than 500,000 content elements
- 50,000 references with hyperlinks to PubMed citations in the National Library of Medicine's database for access to full-text of articles
- Drug interactions, cautions, and toxicity alerts
- Detailed information on dosage and methods of administration
- Thorough examination of well-established laboratory and test inferences
- Includes a brief chemical, structural, and/or pharmacologic description; structure-activity relationships are described when applicable; stability and storage information about reconstituted and/or diluted preparations
- Expanded descriptions of all pharmacologic activities and effects are included; pharmacokinetics describing the absorption, distribution, and elimination characteristics of a drug
- Regular updates incorporate official therapeutic guidelines from National Institutes of Health, Centers for Disease Control, American Heart Association, American Academy of Family Practice, and dozens of other medical societies.

### Purpose

- To present comprehensive clinical data and therapeutic guidelines on all FDA approved drugs and medicines with a level of detail found in no other reference
- To provide accurate, unbiased and evidence-based drug information to all health-care professionals

### Uses

- When you need answers to questions you can't find in any other drug resource
- For detailed, comprehensive, and evidence-based information on labeled and unlabeled drug uses
- When you need support by objective evidence through links to primary literature
- For therapeutic guidelines and recommendations supported by evidence and reviewed by peers

### Key Coverage

- Mechanism of action, spectrum, and resistance
- US Brand and Generic names
- Synonyms
- Therapeutic Class
- Uses-labeled and unlabeled
- Dosage and Administration
- Cautions
- Drug Interactions
- Pharmacology
- Laboratory Test Interferences
- Pharmacokinetics
- Chemistry and Stability
- Preparations
- References

### Updates

All the content is revalidated, revised, and updated on a regular basis. This process involves both scheduled, in-depth revision on each monograph and updates in reaction to new information as it arrives. All revised content undergoes a series of rigorous checking procedures to ensure not only that any changes are valid and appropriate but also that important points have not been missed. All monographs and updates are peer-reviewed and supported by references to primary research and literature.

### Audience

- Pharmacists
- Clinicians
- Healthcare Professionals
