

Dietary Supplements

Product Description

Dietary supplements have become increasingly popular in recent years. Research into the safety and efficacy of these substances is intensifying, with a large number of quality trials being published in the past few years. Dietary Supplements includes the latest findings on the most commonly used dietary supplements.

Dietary Supplements is an essential reference source for pharmacists, dieticians, CAM practitioners and other health professionals looking for up-to-date information on safety and efficacy.

Purpose

- To provide online access to the latest Dietary Supplement information available
- To provide a useful online resource for health professionals advising patients on the safe use and prescription of Dietary Supplements
- To provide a lead-in to the published evidence base

Uses

- When you need concise, accurate information about supplements
- For information on safety and efficacy of supplements
- For an update on regulations relating to dietary supplements in UK, Europe and USA
- For information regarding interactions with conventional medicines

Key Coverage

- Includes over 100 comprehensively referenced monographs, informed by the latest research and evidence.
- Full revisions and updates regularly made to all monographs.
- New monographs are included with each online update.
- Regulations relating to dietary supplements in UK, Europe and the USA
- Useful appendices including a summary of interactions with conventional medicines
- Advanced text searching

Updates

Every six months new monographs are written and current monographs are updated with the latest research and evidence.

Audience

- Community pharmacists
- Dieticians
- Nutritionists
- Pharmacy students (undergraduate and postgraduate)
- CAM practitioners
- Healthcare professionals
