

Kucers' the Use of Antibiotics

Product Description

Kucers' the Use of Antibiotics is the leading resource in this vast and rapidly developing field, bringing together information on antimicrobial agents in a manner that is unrivalled.

Outlines the clinical use of all antimicrobials-antibiotics, antifungals, antiparasitic and antiviral agents. The addition of antiparasitic agents in this edition means that it now covers the whole of antimicrobial therapy.

The content of *Kucers' the Use of Antibiotics* has been compiled by an expanded team of internationally renowned and respected editors, with a vast number of contributors spanning Europe, Africa, Asia, Australia, South America, the US and Canada.

Purpose

Allows accurate search and retrieval of all information needed when treating infections requiring antimicrobial therapy.

Uses

Provides comprehensive coverage of the field and invaluable to anyone using antimicrobial agents in their clinical practice.

The data is described in a way that is interesting and useful to health professionals who treat patients.

Incorporates enough basic science to be useful to microbiologists and researchers in the field.

Key Coverage

Highly structured and divided into four key sections:

- Antibiotics
- Anti-fungal drugs
- Anti-parasitic drugs
- Anti-viral drugs

Content then in turn structured to cover:

- Susceptibility
- Resistance
- Mechanism of drug action
- Mode of administration in dosage
- Dosage information for adults, newborn infants and children and altered doses
- Pharmacokinetics and Pharmacodynamics, drug distribution and excretion, drug interactions
- Toxicity
- Clinical usage of the drug

New features include a diagram of the chemical structure for each compound, many more tables to better summarise susceptibility data, drug dosing and to collate important clinical trials, and new sections regarding clinically important pharmacokinetic/pharmacodynamic data and drug interactions.

Extensive OpenURL enabled references allow you to navigate to your institution's available journal articles.

Audience

- Valuable to all physicians dealing with infections
- Pharmacologists
- Infectious disease consultants
- Academics and students training to enter the healthcare professions
