

What's new in AHFS Drug Information September update 2009

AHFS Drug Information is continually undergoing re-validation and revision. Each month, new and revised sections are published on MedicinesComplete. This is a list of the changes made since the last update.

This update contains 22 revised monographs and 1 new monograph. MedWatch alerts are included from August (Certolizumab, Orlistat, Etanercept, Infliximab, Adalimumab, and Botulinum Toxin). Also included are revisions due to updated therapeutic guidelines or labeling (Iodoquinol, Bacitracin, Duloxetine, Diclofenac, Mupirocin, and Dutasteride). Irbesartan was expanded from a SumMon to an Overview monograph (Cautions and Drug Interactions sections added; updated labeling, guidelines, and additional references from primary literature included).

New monographs

Everolimus

Revised monographs

Entacapone

Etanercept
