

What's new in Stability-indicating HPLC Methods for Drug Analysis October update 2009

This update includes monographs of 49 new drug entities. There are 84 totally new stability-indicating HPLC methods, including those added to the existing monographs.

New monographs

AG331
Almotriptan Malate
Atazanavir Sulfate
Betamethylepoxyde
Bicalutamide
Biperiden Hydrochloride
Bortezomib
Cabergoline
Carubicin Hydrochloride
Carvedilol
Ceftiofur
Cilostazol
Cyproheptadine hydrochloride
Dasatinib
Desonide
Emtricitabine
Entacapone
Esomeprazole Sodium
Etidronate Disodium
Fluorapacin
Gliclazide
Imatinib Mesylate
Interferon α 2b
Iproplatin
Isopropamide Iodide
Lamotrigine
Melanotan-1
Nitazoxanide
Oseltamivir Phosphate
Oxiconazole Nitrate
Oxyphenonium Bromide
Pemetrexed Disodium
Pentoxifylline
Pibenzimol
Piperaquine Phosphate
Primaquine Phosphate
Reboxetine Mesylate
Rotigotine Hydrochloride
Simvastatin
Tazarotene

Temozolomide
Tetraplatin
Tianeptine Sodium
Tiapride Hydrochloride
Tropisetron Hydrochloride
Vecuronium Bromide
Zaleplon
Zonisamide
Zotarolimus

Revised monographs (contain new methods)

Amlodipine
Ampicillin
Atorvastatin Calcium
Cefotetan
Ceftriaxone
Celecoxib
Ciprofloxacin
Clotrimazole
Cloxacillin
Codeine
Dacarbazine
Donepezil Hydrochloride
Econazole Nitrate
Ezetimibe
Gabapentin
Metoclopramide
Nateglinide
Oxaliplatin
Oxytocin
Phenobarbital
Phenylephrine
Promethazine
Risedronate Sodium
Sulbactam
Tazobactam
Venlafaxine
Zidovudine
Ziprasidone
